

EXTEND FLUID LIFE. REDUCE WASTE. SAVE MONEY.

apexsiterentals.com

The IFM solution benefits your drilling operation by:

EXTENDING FLUID
QUALITY AND LIFE

OPTIMIZING SOLIDS
CONTROL

REDUCING NOISE
AND VAPOUR

LOWERING THE
ENVIRONMENTAL
FOOTPRINT

PROVIDING DATA FOR
FAST DECISION-MAKING

Apex Integrated Fluid Management Solution

As a site operator, you need to keep drill fluid on location for as long as you can, in the best form possible.

The Apex Integrated Fluid Management (IFM) solution was developed using years of on-site experience, equipment expertise and technical input. We've designed a system that not only **extends fluid life** and **optimizes solids removal**, but also protects your workers, and reduces the environmental footprint by minimizing net waste.

THE APEX INTEGRATED FLUID MANAGEMENT SOLUTION DELIVERS

Extend fluid life

The IFM solution stabilizes the primary separation process so the centrifuge works its best.

- Improved mud rheology.
- Up to 35% increase in volume of fluid recovered from drill cuttings.

Reduce noise and vapour

Improve health and safety by eliminating operator exposure to mist & vapours, excessive noise, vibration, and flash-over fire hazard.

- Vapours are directed away from on-site personnel.
- Noise levels are reduced to below 90 dB.

Optimal solids control

The IFM bypasses the traditional vibrating shale shaker, resulting in less fluid on the cuttings and better quality fluid recovery.

- Increase drilling rate-of-penetration (ROP).
- Remove solids particles down to below 1 micron.

You will also benefit from

- Our in-house facility can custom fabricate to suit your drilling configuration.
- Delivery and set-up on location.
- Expert on-site management.
- Hassle-free cold weather operations.
- Data that allows you to react quickly to changes in the drill process.

Lower environmental footprint

Less net waste generated and higher waste stability lowers your disposal costs.

- 60% less mix-off material required.
- Meet government mandated criteria for waste-to-landfill requirements.
